Why I chose the Reality theme?

I chose the theme called Reality because it is a theme made for real estate business websites. I felt that it had a lot of plugins included that would serve the purpose and make the progress run smoothly. The theme has a nice, clean and modern feel and a very professional look.

I ran into a slight problem with the property plug in and it wasn't letting me assign a property to either Rent or Sale, so I used a different plugin which solved the issue.

INSTRUCTIONS

Adding new properties

1. Click Add New Property from the Real Estate Manager tab

2. Add details about the new property

3 - Use dropdown menu to select an author

4. Edit property details within the different tabs (Type = Rent or Sale etc)

5. Click upload images to add images to the gallery

6. Click Publish to make the property live on the website.

Edit existing properties

1. Click the Properties tab under Real Estate Manager followed by clicking on any of the existing properties
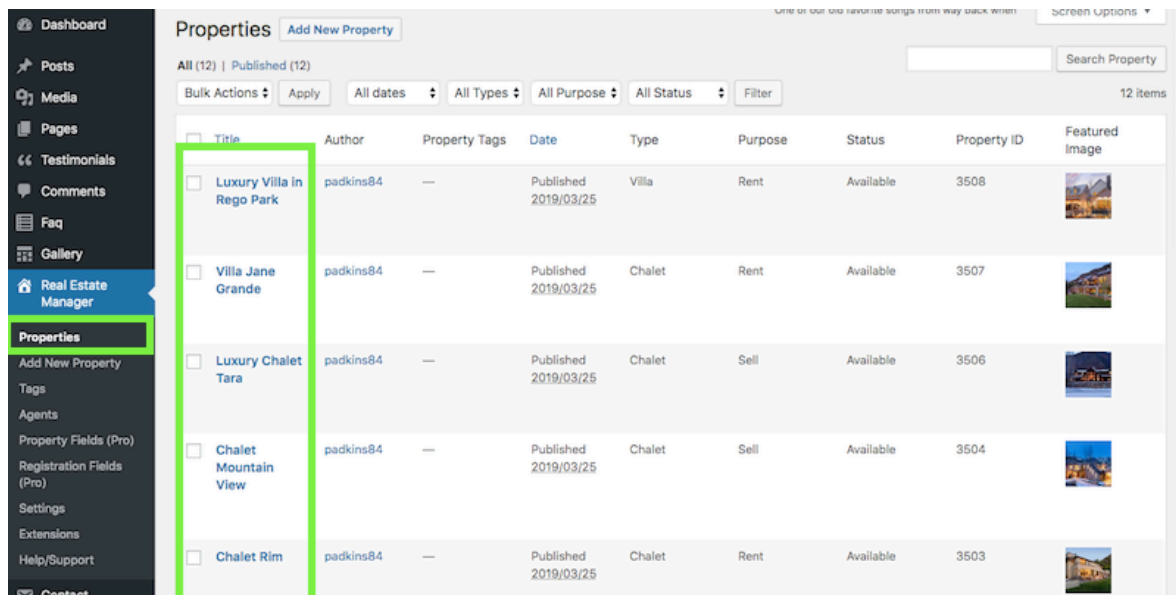

2. Edit/update any information needed on your existing properties.
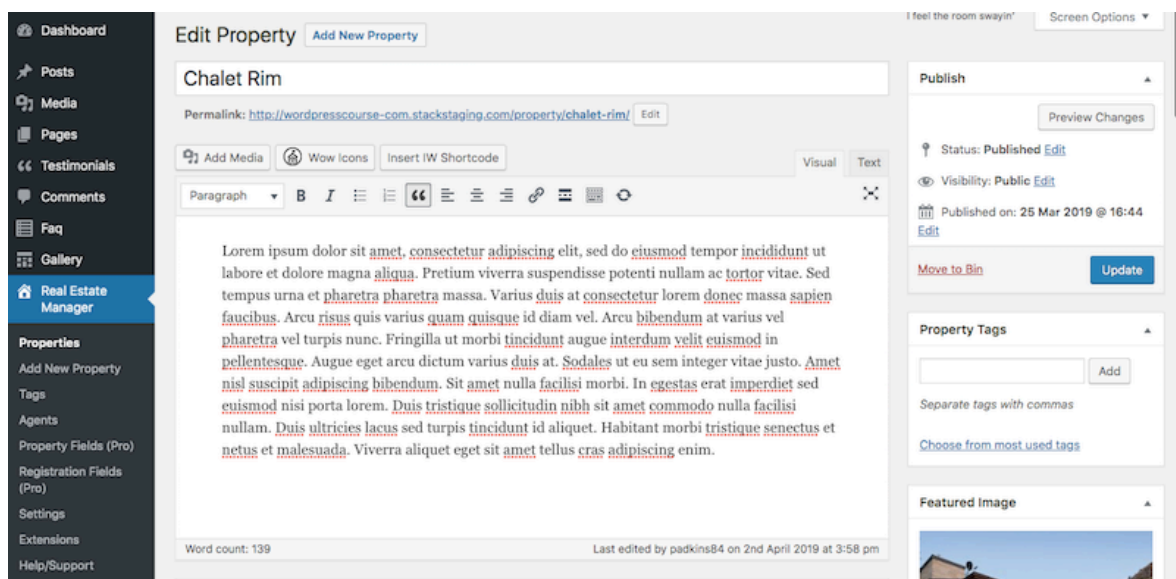

Add users/employers to become an editor

1. Click users on the left menu then Add New at the top of the page.

2. Fill the required fields, choose a role from the dropdown menu and when finished click Add New User at the bottom.
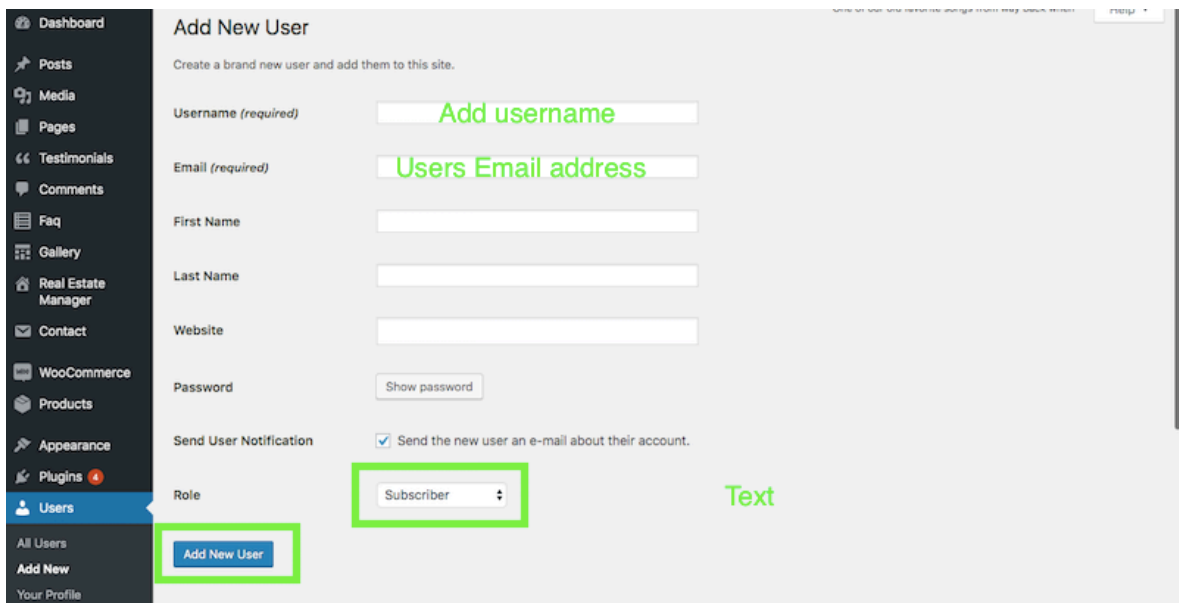

CSS Changes

Changes the colour of top footer text to brand colour gold

```css
.iw-footer .iw-footer-menu li a {
    color: #bba267;
}
```

Changes footer 2 header to brand colour gold

```css
footer.iw-footer .widget widget-title {
    color: #bba267;
}
```

Changes copyright theme link to gold

```css
body .iw-copy-right a {
    color: #bba267;
}
```

## Changes background footer colour

```css
iw-footer.iw-footer-default.iw-footer-top {
    background-color: #bba267;
}
```

```css
footer.iw-footer .widget .widget-title {
    color: #bba267;
}
```

Changes dropdown menu text to brand colour gold in smaller screen size

```css
.off-canvas-menu .canvas-menu li > a {
    color: #bba267;
}
```

Added padding to the main content

```css
.contents-main, .main-content {
    padding: 0 20px;
}
```

```css
.off-canvas-menu .canvas-menu li.active > a {
    color: #bba267;
}
```

Changes the background colour of the footer

```css
.iw-footer.iw-footer-default .iw-footer-top {
        background-color: #1b1919;
}
```

Changes theme header background colour to gold

```css
.header.header-default.header-style-v6 .iw-header {
    background-color: #1b1919;
}
```

Changes body copyright link colour

```css
body .iw-copy-right a {
    color: #bba267 !important;
}
```

```
html body {
    color: #bba267;
}
```

Changes horizontal rule to 1px solid with the colour of gold with opacity

```
hr {
    border-top: 1px solid #bba2679e;
}
```

Changes the width of the form (stops it stretching off page)

```
.wpcf7 {
    width:100% !important;
}
```

```
.wpcf7-form input[type="text"], input[type="email"],
input[type="url"], input[type="password"],
input[type="search"], input[type="number"],
input[type="tel"], input[type="range"], input[type="date"],
input[type="month"], input[type="week"],
input[type="time"], input[type="datetime"],
input[type="datetime-local"], input[type="color"], select,
textarea {
    width:100% !important;
}
```

Added padding to the form to add space at the top

```css
div.wpcf7 {
    padding-top: 10px;
}
```

Adds a background colour to the submit button

```css
input[type="button"], input[type="submit"], button {
    background-color: #f0f0f0;
}
```

Makes the text area on the form smaller

```css
textarea {
    max-height: 90px;
}
```

```css
.ich-settings-main-wrap code {
    color: #bba267;
}
```

Changes link colour to gold

```css
a {
    color: #bba267;
}
```

Changes colour of the navbar

```css
.navbar-default .navbar-nav > li > a {
    color: #ffffff;
}
```

Removed the added theme code colour in the homepage property section

```
code {
    color: #f9f2f400;
}
```

Added padding to top of image to make inline and lowered opacity to give a better effect

```
.wpb_single_image img {
    padding-top: 53px;
    opacity: 0.6;
}
```

Changes the header colour and menu colour to brand gold

```
.header-default .iw-main-menu .iw-nav-menu .sub-menu
li a, .header .iw-header .iw-menu-main .navbar-
nav .sub-menu li a {
    color: #bba267!important;
}
```
